

THE DRAFTING DYNASTY :

WHICH NBA FRANCHISE DOMINATES THE DRAFT?

Wharton Moneyball Academy Presentation By:

Vik Dandapani, Pranav Batra, Ben Wolf, Alex Min, and Juju
Zhao

A photograph of Nikola Jokic, a Serbian professional basketball player, celebrating with the Denver Nuggets. He is wearing a white Denver Nuggets jersey with the number 15 and is holding the NBA Championship trophy. He is surrounded by teammates and staff, some wearing "2022-23 NBA Champions" hats. The background is a blurred crowd of fans.

DEFYING EXPECTATIONS: NIKOLA JOKIC

PICK IS IN		Nikola Jokic PF - Serbia		
		RD2	41	

30. SPURS - Kyle Anderson SF/UCLA ROUND 2 31. BUCKS - Damlen Inglls SF/France

**PART 1: QUANTIFYING DRAFT PICK
VALUE**

How valuable exactly was Jokic's selection at 41?

What are other Jokic-like picks across modern NBA history?

CHOOSING OUR ADVANCED STAT

Win Shares

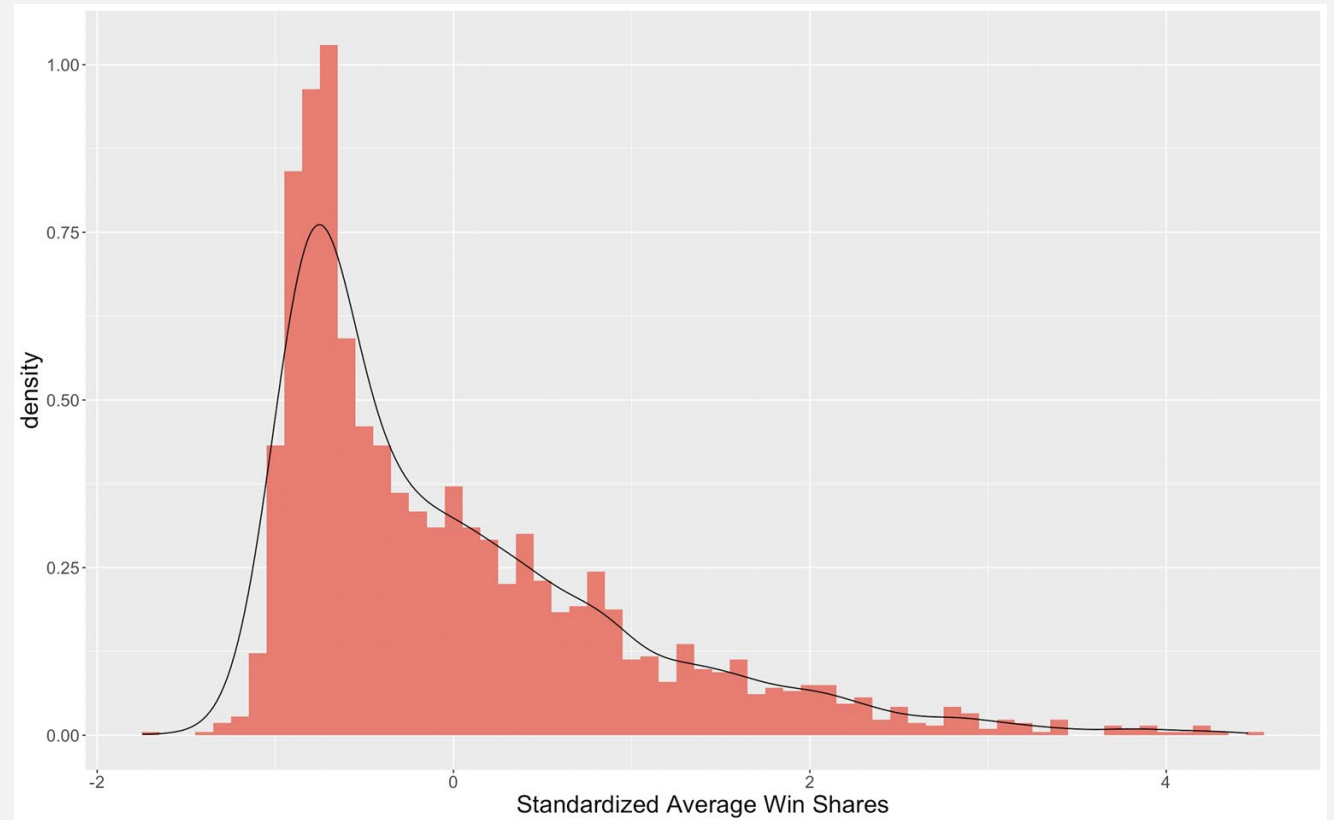

- A metric to estimate the number of wins a player *directly* contributes to their team over the course of the entire season

How to Calculate CAWS

- Calculate individual WS for each season
 - Offensive and Defensive
- Add WS values from each season to find career WS
- Divide career win shares by seasons played to get Career Average Win Shares

STANDARDIZING WIN SHARES RELATIVE TO DRAFT CLASS

- Most models evaluate relative to draft position, but you can only draft who is available
- Want to evaluate teams' drafting relative to who they can pick
- Standardize average WS/season within draft classes

Chris
Paul 4.46 Z-
Score

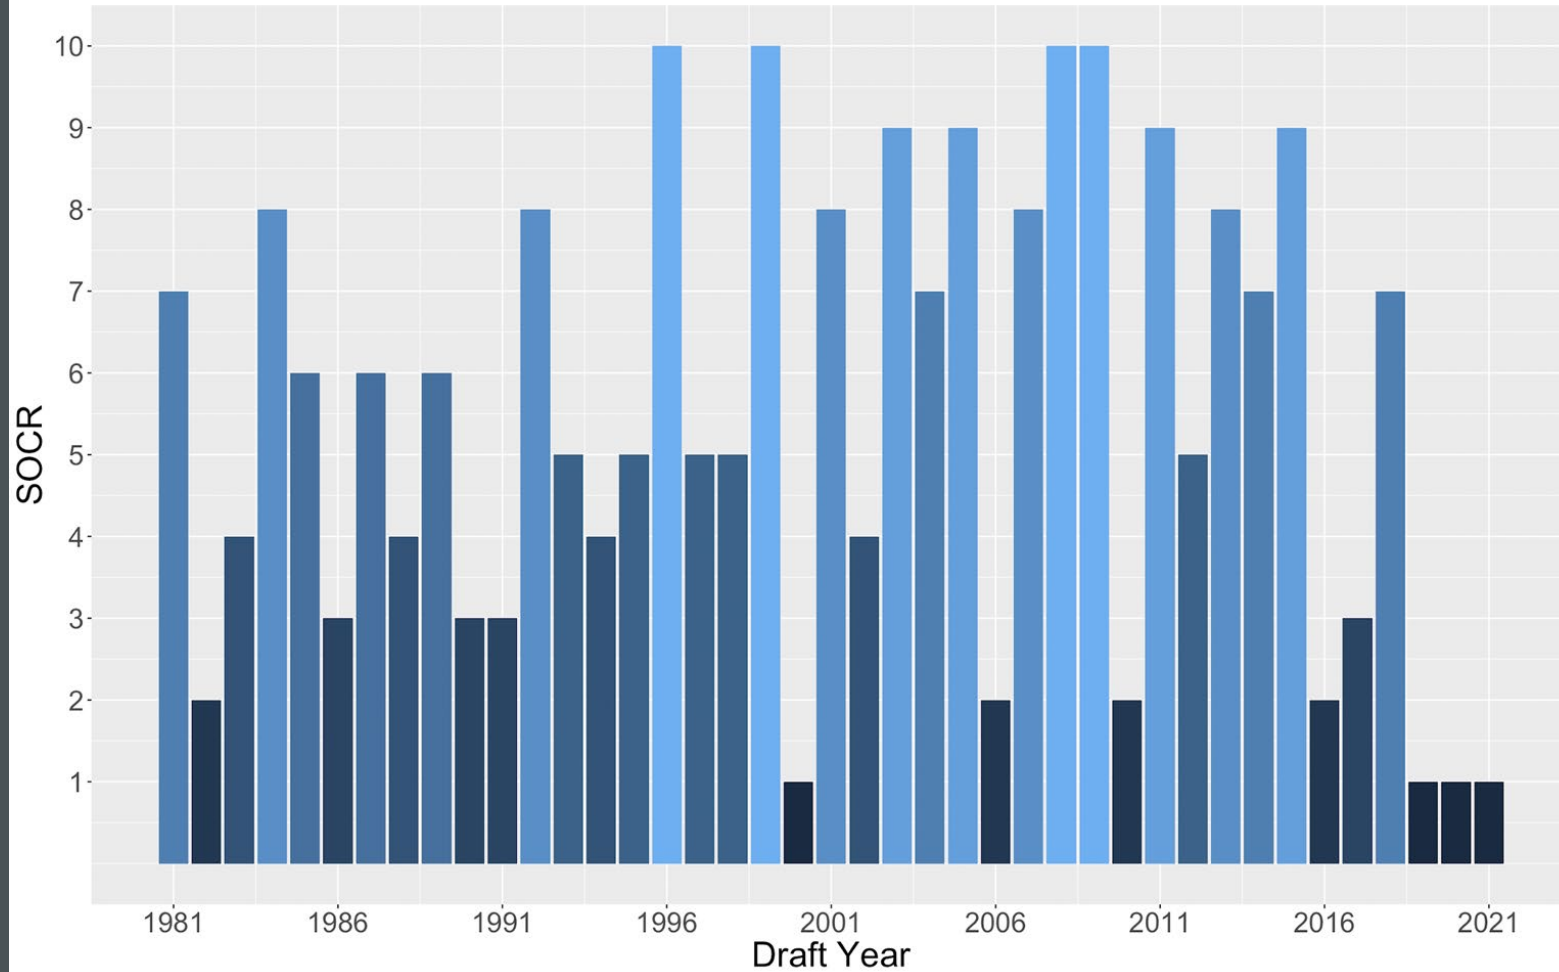

ADJUSTING PICK VALUE FOR PICK POSITION

- How players out/under perform expected results given draft position
- Higher expectations usually indicative of a better player and vice versa

ADJUSTING FOR DRAFT CLASS STRENGTH: S.O.C.R.

- Discrepancies in average player value of each draft must be accounted for
- Calculated the average win shares per draft class from the average win share of each player
- Created ranking system by sorting classes into ten bins

CREATING THE FINAL FORMULA

- If Standardized Average Win Shares < 0
 - JOKIC = Standardized Avg Win Shares * 1/(Pick Number) * 0.004358 * SOCR

- If Standardized Average Win Shares > 0
 - JOKIC = Standardized Avg Win Shares * 0.0126193 * Pick Number * 0.004358 * SOCR

*From Left: Darko Milicic, LeBron James

BEST AND WORST PICKS ACCORDING TO OUR METRIC

BEST

1. Nikola Jokic (41, 2014, 6.59)
2. Manu Ginobili (57, 1999, 5.78)
3. Marc Gasol (48, 2007, 4.42)
4. DeAndre Jordan (35, 2008, 4.13)
5. Jimmy Butler (30, 2011, 4.04)

WORST

1. Anthony Bennett (1, 2013, -2.84)
2. Michael Olowokandi (1, 1998, -1.52)
3. Hasheem Thabeet (2, 2009, -1.34)
4. Greg Oden (1, 2007, -1.24)
5. Darko Milicic (2, 2003, -1.15)

*Name (pick, year, metric score)

AFTER ALL OF THIS, WE CAN NAME
OUR FINAL METRIC...

THE "J.O.K.I.C." METRIC

J— Judging

O – Outstanding

K – Knowledge

I – In

C - (Draft) Choice

2 THUNDER

3 ROCKETS

4 KINGS

5 PISTONS

PART II: IDENTIFYING THE BEST
DRAFTING FRANCHISES

6
7 TRAIL BLAZERS

9 SPURS

10 WIZARDS

11 KNICKS

12 LAKERS

Have teams consistently found value in the draft?

Have the best - drafting teams fluctuated across decades?

Where do the best - drafting teams according to the JOKIC metric usually make their picks?

THE FIVE BEST DRAFTING TEAMS ACCORDING TO THE J.O.K.I.C. METRIC

1.

2.48 Z-Score

2.

1.54 Z-Score

4.

1.48 Z-Score

3.

1.46 Z-Score

5.

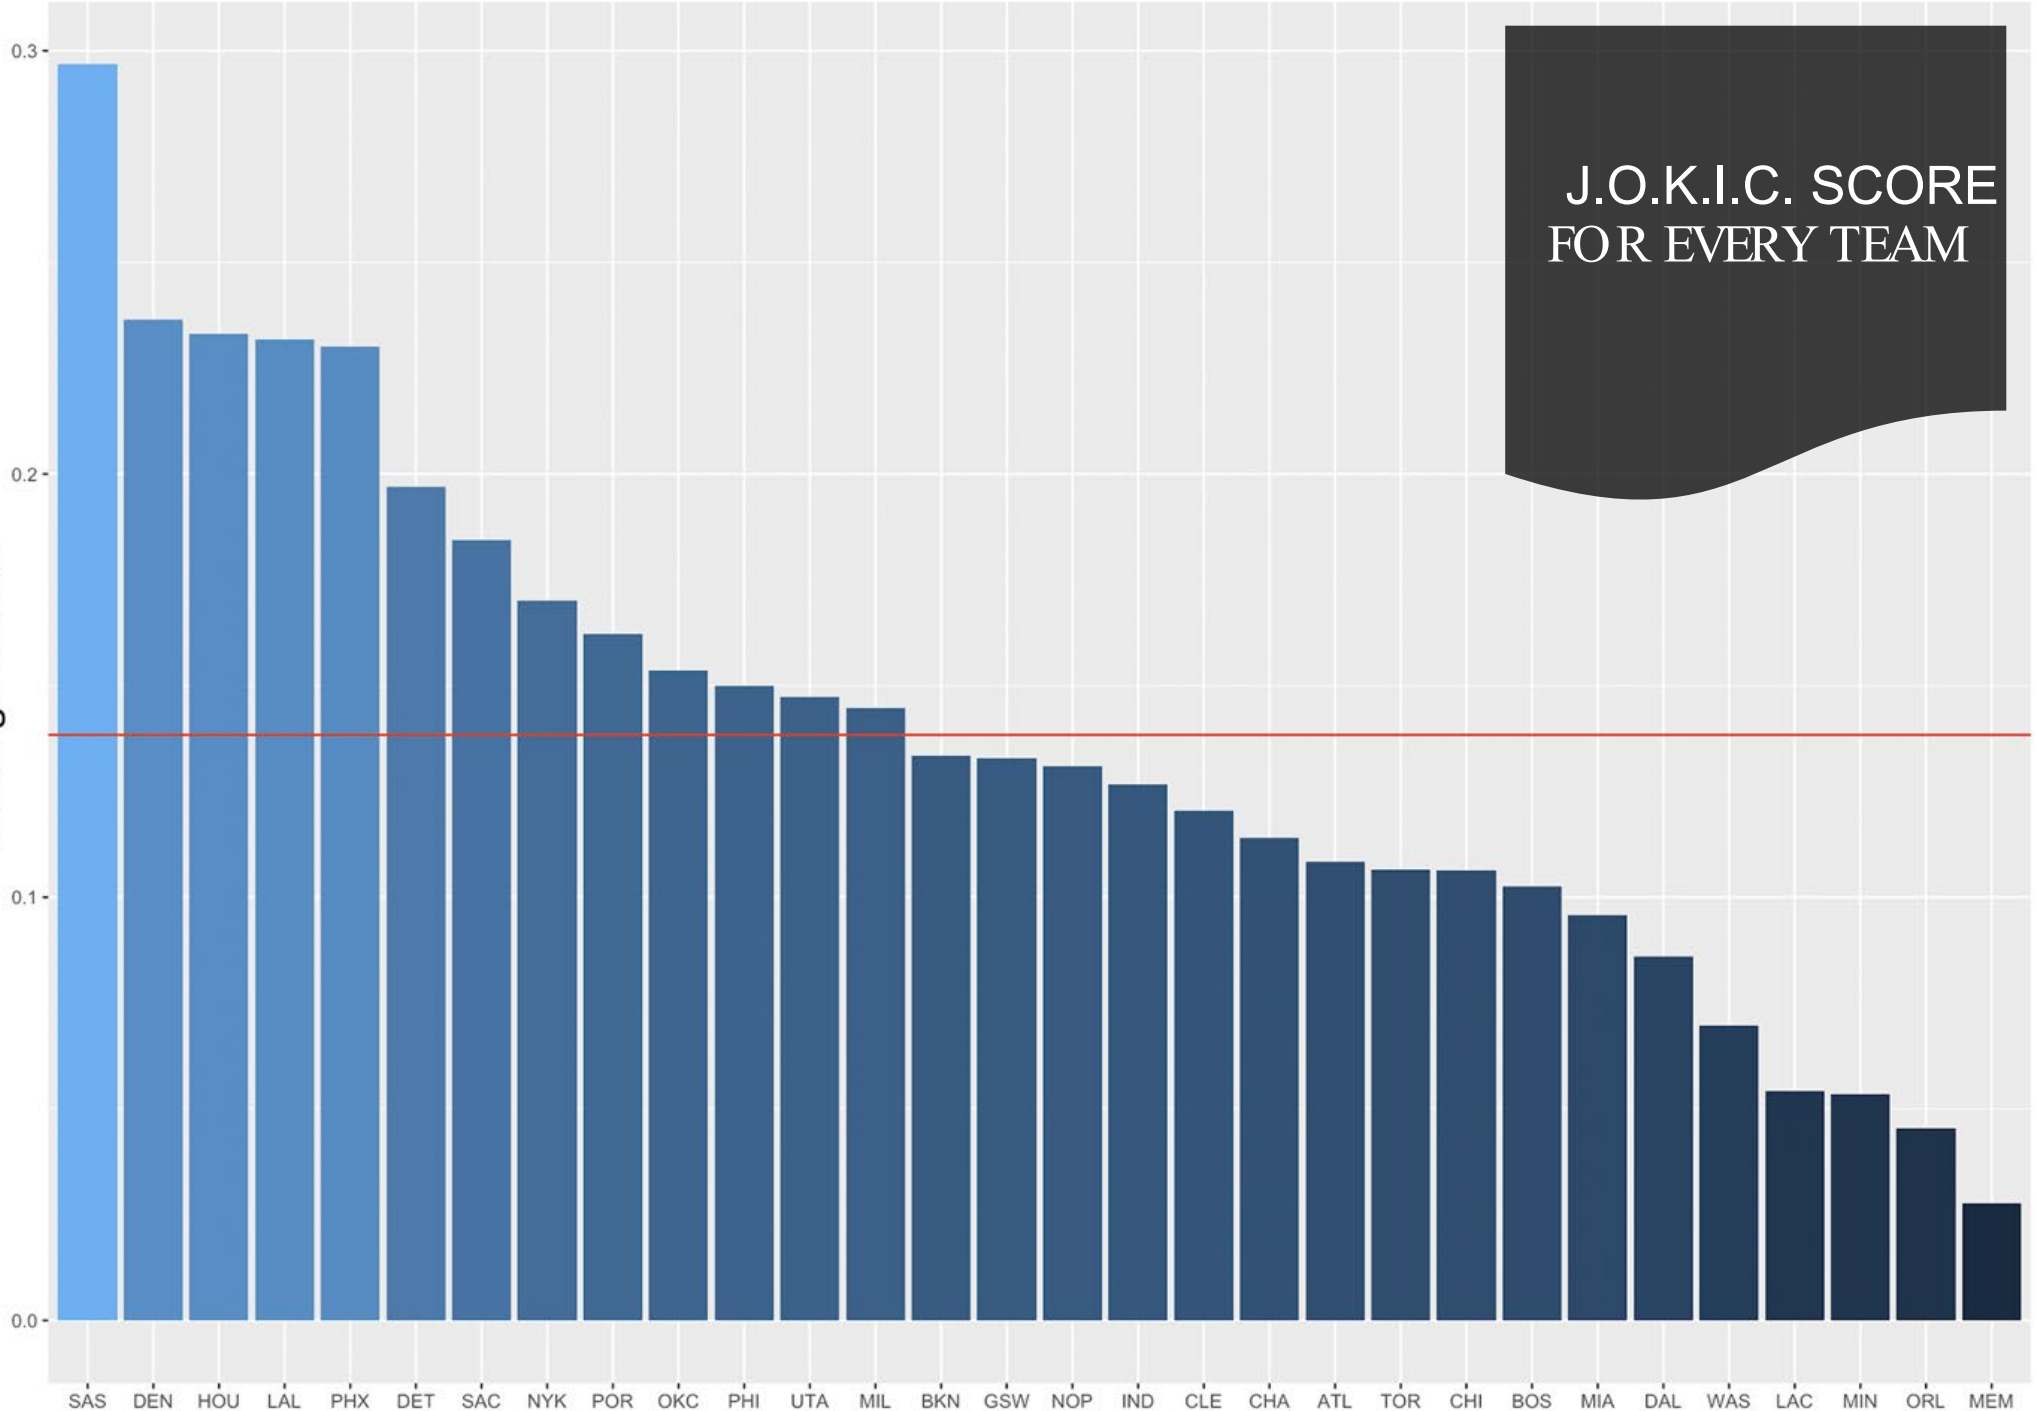

1.43 Z-Score

*According to the J.O.K.I.C. metric

J.O.K.I.C. SCORE FOR EVERY TEAM

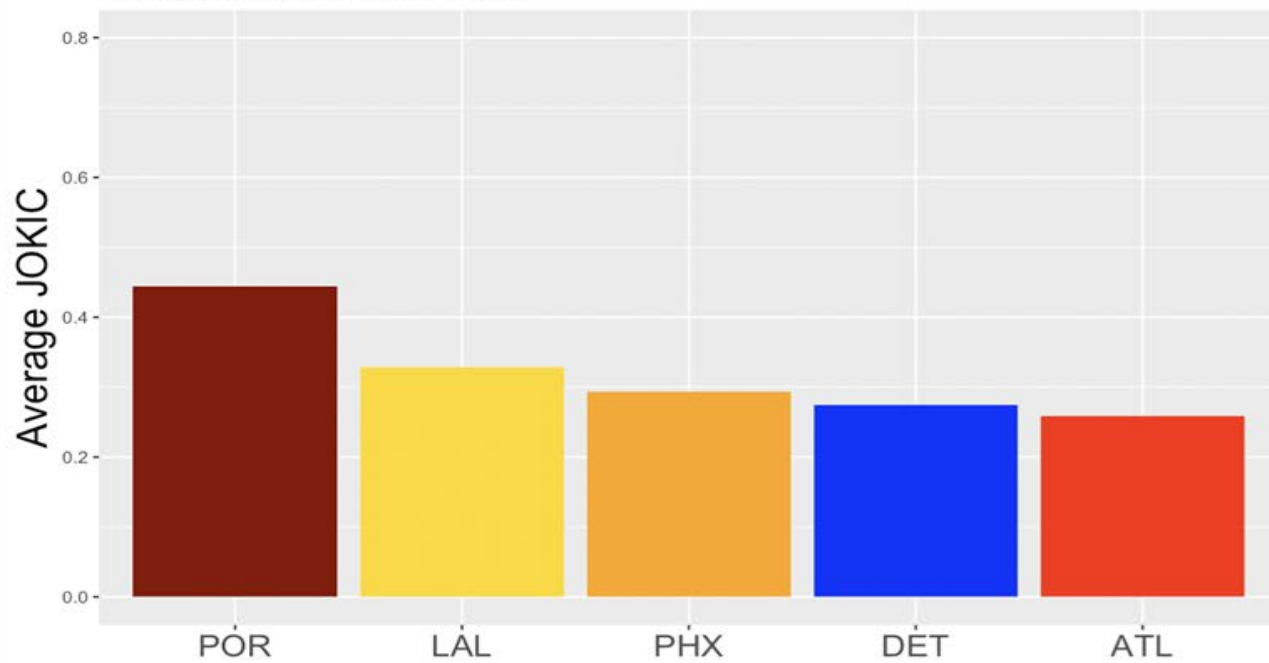

Average JOKIC

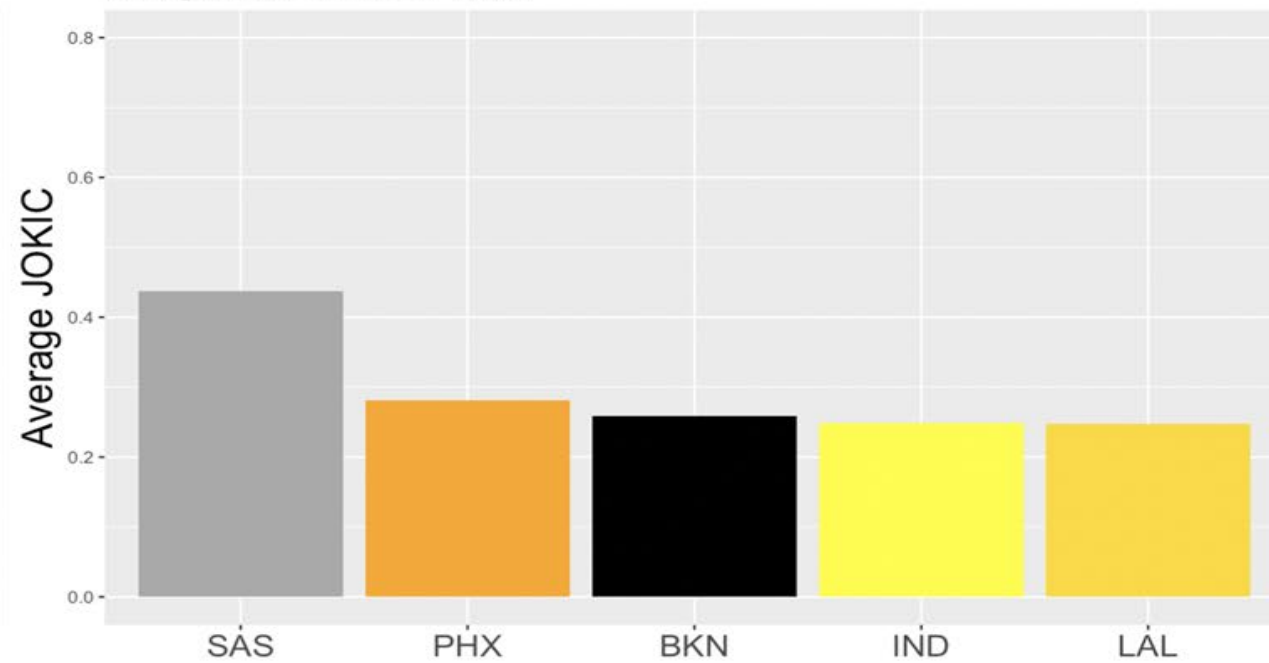

LET'S BREAK IT DOWN BY DECADE

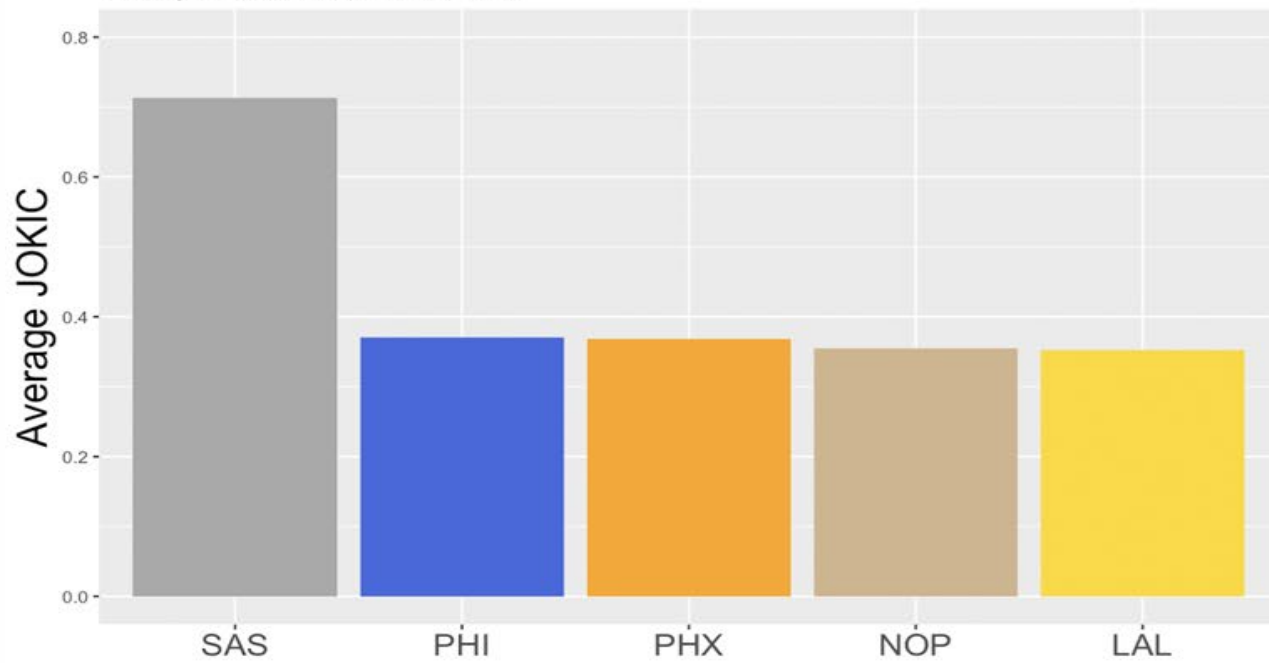

Average JOKIC value over 1980s

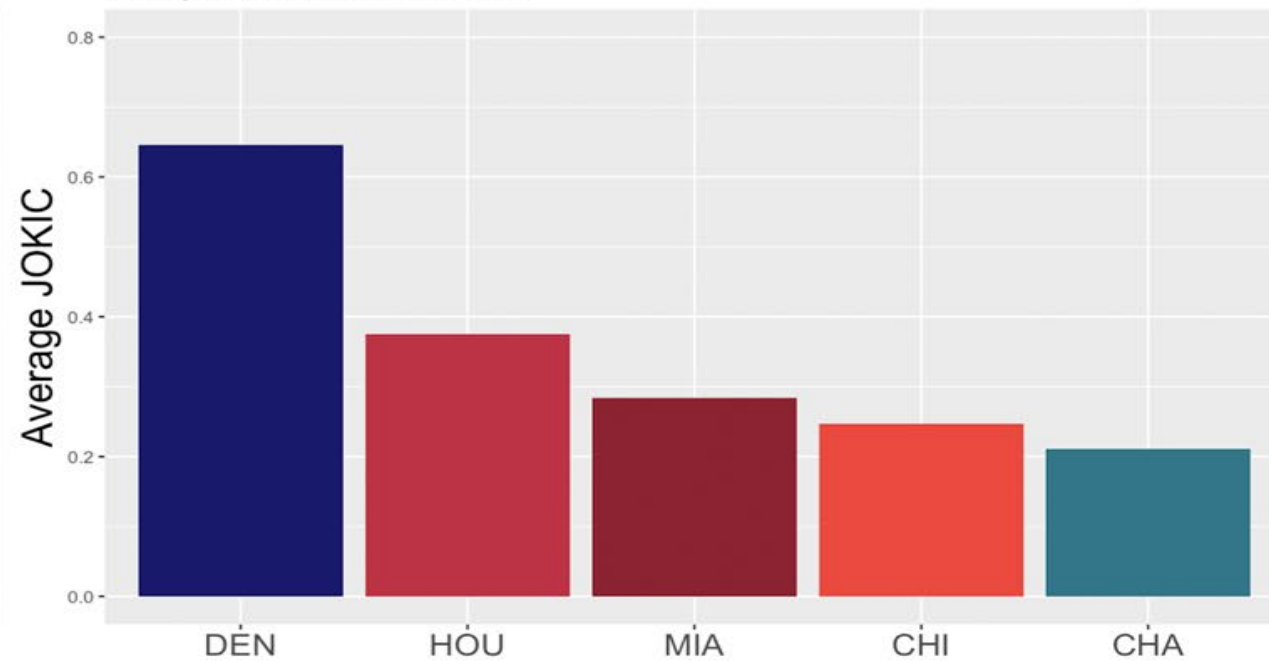

Average JOKIC value over 1990s

Average JOKIC value over 2000s

Average JOKIC value over 2010s

MOST VALUABLE PICK POSITIONS

MOST VALUABLE PICK POSITIONS

Earning Win Shares for
Original Team

AREAS OF IMPROVEMENT

NEXT STEPS

- Building a college/pre-NBA prediction model
 - Collecting more data in terms of college basketball players and international athletes.
- Including more advanced stats accounting for difficulty of competition (standardizing win shares)
- Creating a new evaluation metric aside from WS
